

Fusion Development User Group (FDUG) - Minnesota

The Fusion Development User Group (FDUG) is an independent community of professionals collaborating to be more productive and effective, and ultimately driving value for organizations that deploy Oracle Fusion technologies.

The focus of the FDUG will be in areas related to *core* Fusion Middleware, including development, runtime, and management of solutions using these technologies. Rather than cast the net too broadly, the scope is narrowed to products that are at the heart of Fusion-based solutions, including:

- SOA/Integration (SOA Suite, JMS, etc.)
- ADF, ADF Mobile
- WebCenter Portal, Content, Social
- Identity and Access Management

Agenda
