Senior Software Engineer

Flexagon is on an exponential growth trajectory, driven by the excellence of its employees and ability to deliver exceptional customer satisfaction with our products and services. Our Application Release Automation product, FlexDeploy, is at the forefront of the DevOps and Continuous Delivery movement. Join a team of fun and driven professionals as we change the world of software development and delivery.

We are looking for an energetic and talented Senior Software Engineer to join our product development team as we rapidly evolve FlexDeploy and FlexFoundation, and bring other new products to market.

Qualifications
- Excellent technical skills and the motivation to keep up with the latest technologies.
- Team-player who thrives in a high-energy and dynamic environment.
- Experience working in an agile development process.
- Results-driven, delivering the best possible product and services with speed and quality.
- Excellent communication and collaboration skills
- BS degree in Computer Science or equivalent experience
- 5-8+ years of Java software development experience for enterprise software systems

Nice to haves (the more the better)
- Experience with JavaScript, Python, Jython, Perl, Groovy, Ruby, AngularJS, JQuery, etc.
- Experience with Maven, Hudson, Jenkins, TeamCity, Bamboo, Thoughtworks Go, etc.
- Experience with Java platforms based on Oracle WebLogic, IBM WebSphere, and JBoss

How to apply: Submit your cover letter and resume to info@flexagon.com
