## FlexDeploy Enables the Shift

# Software Deployment Before and After

### Traditional E-Business Suite Deployment Challenges

- Manual and error-prone migrations of customizations and functional setups
- Ad-hoc deployment with poor visibility
- Lack of consistent version control
- Test and Production environments do not match
- Multiple object types, each with their own deployment approach
- Concurrent project development in shared environments
- Complexity to automate leads to slower software delivery

### Software Delivery with DevOps and FlexDeploy

- Focus on delivering business value
- Promotes agility to support faster delivery
- Significant focus on automation and streamlined processes
- Targets people, process, and technology
- Enables developer self-service
- Visibility to what changed, when, and by who
- Consistent tooling for all teams; Dev, Ops, QA, Release Management, etc.
- Flexibility to deploy on-premises or cloud

"FlexDeploy has dramatically improved our ability to deliver software fast and with high quality, positioning us to meet our aggressive business growth strategy. In addition to support for Oracle Fusion Middleware and E-Business Suite, FlexDeploy supports other Oracle and non-Oracle technology, exceeding our high expectations for an enterprise automation platform."

— CIO, Global Food Manufacturer

## FlexDeploy is DevOps and Application Release Automation

FlexDeploy enables the shift to more agile, high quality, and cost effective software delivery.

- Automated processes replace manual and error-prone methods, increasing speed and quality of deployments
- Consistent and repeatable change processes drive consistency across test and production environments
- Dashboards and reports provide real-time and historical visibility to changes across environments
- Oracle Plugins Eliminate Manual Steps & Scripting (*see plugins list on right*)
- Common platform for many Oracle and non-Oracle technologies

#### Oracle Plugins and Integrations:

- **Fusion Middleware:** WebLogic, SOA, OSB, B2B, BPM, ODI, WebCenter, OBIEE, MFT
- **Database & Developer:** Oracle DB, JDev, ADF, Application Test Suite, APEX, Forms
- **Cloud IaaS and PaaS:** Compute, Storage, Network, Database, Java, SOA, Application Container
- **Applications:** EBS, SaaS Extensions
